

Kitchen Sink Fit Worksheet

Type into the fields or print this page. Keep one sheet per candidate sink and give it to your installer.

01 Identify the exact sink and installation

Brand + full model / suffix

Mounting type + current cutout drawing

Chosen units: inches or millimeters

Manufacturer drawing / revision date

02 Record constraints using the same reference

Clear inside cabinet width x depth x height

Planned bowl-bottom height + reference point

Wall-drain center height + same reference

Disposal model + outlet drawing / height

Rails, clips, bins, plumbing or support conflicts

Existing cutout / corners / reveal to confirm

Nominal cabinet width is not clear interior width. A minimum cabinet label does not prove the existing countertop opening or drain arrangement will work.

03 Confirm before ordering or cutting

- ☐ Installer checked the exact sink drawing, supports, clips and service space.
- ☐ Installer confirmed the bowl, disposal outlet and wall drain as one arrangement.
- ☐ Fabricator confirmed the actual opening and any workstation-accessory clearance.
- ☐ Selected package, included accessories and return conditions were checked.

Unresolved item / who will confirm it / date

Use the exact manufacturer template and a qualified installer. This sheet supplies no universal clearance, cutout size, plumbing design or guarantee of fit.
